Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 17 February 2010.
 2a) This action is **FINAL**. 2b) This action is non-final.

1. Claims 1-8 and 10-30 are pending. Claims 1, 4, 7, 12, 17, 23, and 27 are independent.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi et al. (Japanese Publication No. JP 04-071158). The only available English version at the time of this Office action is the English abstract.

Regarding claim 23, Kobayashi et al. discloses a method for making an illuminating device, comprising providing a lamp (cold-cathode fluorescent lamp 4), providing a heating light source (LED 8) having a warm-up time period considerably less than that of the lamp (4), the heating light source (8) being configured to generate an amount of heat effective to shorten a warm-up time period of the lamp (see abstract). Although the abstract does not mention providing a timer and a controller as claimed, one of ordinary skill in the art would have realized that the heating light source would have to be controlled by either having the heating light source (8) on for a predetermined time period or leaving the heating light source (8) on until a certain temperature of or at the vicinity of the lamp (4) (or of the electrodes 4a thereof) reaches a predetermined temperature, to reduce power consumption or avoid overheating of the

lamp (4). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the method of Kobayashi et al. with providing a time and coupling a controller to the lamp (4), heating light source and timer as claimed to turn off the heating light source (4) upon expiration of a predetermined time period to reduce power consumption

4. Claims 24-26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 1-8, 10-22 and 27-30 are allowed.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
